expandIncludes

Kind: Function

Source: `atloria-monorepo/apps/api/src/snippets/expand-includes.ts`

Expand every `::include{snippet="..."}` reference in `markdown` using `resolve` (name → snippet markdown, or undefined when unknown).

Signature

```
function expandIncludes(markdown: string, resolve: (name: string) => string | undefined, options: ExpandIncludesOptions): ExpandIncludesResult
```

Parameters

Name	Type
<code>markdown</code>	<code>string</code>
<code>resolve</code>	<code>(name: string) => string</code>
<code>options</code>	<code>ExpandIncludesOptions</code>

Returns: `ExpandIncludesResult`
