

extractComponentStateMachines

September 4, 2026

extractComponentStateMachines

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/utils/component-state-machine-extractor.ts](#)

Extract state machines from component code

Handles both enums defined in the same file and imported enums

Signature

```
function extractComponentStateMachines(componentCode: string, componentFilePath: string): StateMachine[]
```

Parameters

Name	Type
componentCode	string
componentFilePath	string

Returns: `StateMachine[]`
