extractEntityMentions

Kind: Function

Source: [atloria-monorepo/packages/doc-automation/src/v2/stages/stage-11-verification/grounding-checker.ts](https://github.com/atloria-monorepo/packages/doc-automation/src/v2/stages/stage-11-verification/grounding-checker.ts)

Extract potential entity references from generated markdown.

Looks for:

- Capitalized phrases (2+ words starting with uppercase): "Sales Order", "Journal Entry"
- Quoted terms: "something" or 'something'
- Bold terms: **something**
- Menu paths: "X > Y > Z" or "X → Y → Z"

Returns a deduplicated, normalized (lowercase, trimmed) array.

Signature

```
function extractEntityMentions(markdown: string): string[]
```

Parameters

Name	Type
markdown	string

Returns: string[]
