extractFAQ

Kind: Function

Source: [atloria-monorepo/apps/web/src/lib/structured-data.ts](https://github.com/atloria-monorepo/apps/web/src/lib/structured-data.ts)

A page is an FAQ when its type says so, or heuristically when ≥ 3 of its section headings end with a question mark. Answers are the plain-texted section bodies, capped so we make claims, not dump pages.

Signature

```
function extractFAQ(markdown: string, pageType: string | null | undefined): FaqSchema | null
```

Parameters

Name	Type
markdown	string
pageType	`string

Returns: FaqSchema | null
