extractGoControlFlow

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/parsers/backend/go-control-flow.ts`

Read the guards and recover blocks out of a span of Go source.

`startLine` / `endLine` are 1-based and inclusive, and are how a caller scopes this to one function; the lines reported back are absolute, so they point into the file the reader opens.

Signature

```
function extractGoControlFlow(source: string, startLine: number, endLine: number): ControlFlow
```

Parameters

Name	Type
<code>source</code>	<code>string</code>
<code>startLine</code>	<code>number</code>
<code>endLine</code>	<code>number</code>

Returns: `ControlFlow`
