extractOutputText

Kind: Function

Source: [atloria-monorepo/apps/api/src/ai/providers/azure-responses.provider.ts](#)

Azure Responses API Provider

Implements the NestJS AIProvider interface using the Azure OpenAI Responses API. This is a fundamentally different API format from Chat Completions:

- Request: `input` (not `messages`), `instructions` (not `system role`), `max_output_tokens`
- Response: `output_text`, `usage.input_tokens` / `output_tokens`
- Streaming: typed `event: + data:` pairs with `response.output_text.delta` events

Signature

```
function extractOutputText(output: unknown): string
```

Parameters

Name	Type
<code>output</code>	<code>unknown</code>

Returns: `string`
