extractProtectedSegments

Kind: Function

Source: [atloria-monorepo/apps/api/src/l10n/translation-format.ts](https://github.com/atloria-monorepo/apps/api/src/l10n/translation-format.ts)

Ordered protected segments of a markdown page: whole fenced code blocks (`` / ~~~, fences included) and directive lines (trimmed line starting with `:::` or `::`). Indented code blocks are NOT protected (they are indistinguishable from lists at this altitude); Atloria generators emit fenced blocks only.

Signature

```
function extractProtectedSegments(markdown: string): string[]
```

Parameters

Name	Type
markdown	string

Returns: `string[]`
