extractPythonControlFlow

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/parsers/backend/python-control-flow.ts](https://github.com/atloria-monorepo/libs/parser-core/src/parsers/backend/python-control-flow.ts)

Read the guards and the failure handling out of a slice of Python source.

`startLine` / `endLine` are 1-based and inclusive, and default to the whole file — a parser passes the span of the class or the handler it is describing, and everything reported is inside it.

Signature

```
function extractPythonControlFlow(source: string, startLine: number, endLine: number): ControlF
```

Parameters

Name	Type
<code>source</code>	<code>string</code>
<code>startLine</code>	<code>number</code>
<code>endLine</code>	<code>number</code>

Returns: `ControlFlow`
