inferParameterSources

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/param-source-inference.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/param-source-inference.ts)

Walk every operation and attach a `x-atloria-param-source` to each path parameter whose values a sibling collection can supply.

Conservative by construction: a binding is emitted only when the collection operation exists, returns a list of objects, and that object carries a usable identifier. Anything ambiguous is left alone — a text box is a fine outcome, a wrong dropdown is not.

Signature

```
function inferParameterSources(spec: OpenApiLike): number
```

Parameters

Name	Type
<code>spec</code>	<code>OpenApiLike</code>

Returns: `number`
