isSafeEndpointUrl

Kind: Function

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts`

An https URL, or http on a loopback host.

The loopback exception is what makes a customer's own dev authorization server usable from a local docs preview; every other http endpoint would put an authorization code — and then a token — on the wire in clear text, so it is refused rather than downgraded silently.

Signature

```
function isSafeEndpointUrl(url: string | undefined): boolean
```

Parameters

Name	Type
<code>url</code>	<code>`string</code>

Returns: `boolean`
