

isWriteRefusedResult

September 4, 2026

isWriteRefusedResult

Kind: Function

Source: [atloria-monorepo/apps/api/src/technical-docs/mcp/api-executor.ts](https://github.com/atloria-monorepo/apps/api/src/technical-docs/mcp/api-executor.ts)

True when a result is the executor's own write refusal (allowWrites off, or a write outside the writeAllowlist) — NOT an upstream 403. Used by the call-logging wrapper to mark blocked:true.

Signature

```
function isWriteRefusedResult(r: { status: number; statusText: string }): boolean
```

Parameters

Name	Type
<code>r</code>	<code>{ status: number; statusText: string }</code>

Returns: `boolean`
