looksGeneratedContent

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/significance.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/significance.ts)

Content that is machine-generated, whatever the file is called.

A path allowlist cannot catch `public/js/app.js` — a 284KB webpack bundle with an ordinary name, which the Express parser happily read as source and produced 51 endpoints from, in a repository that serves 22. Phantom endpoints are worse than missing ones: they document a surface the application does not have.

Minification is the tell that survives renaming — a bundler emits enormously long lines, and hand-written source essentially never does.

Signature

```
function looksGeneratedContent(content: string | undefined): boolean
```

Parameters

Name	Type
<code>content</code>	<code>`string`</code>

Returns: `boolean`
