makeGroundedAsk

Kind: Function

Source: atloria-monorepo/libs/parser-core/src/techdocs/grounded-ask.ts

Make an AskFn from an LLM completion function. Retrieval is done upstream (the toolset passes the retrieved `context`); this grounds the prompt, calls the LLM, and returns only validated citations. Refuses (no LLM call) when context is empty.

Signature

```
function makeGroundedAsk(complete: LlmComplete): AskFn
```

Parameters

Name	Type
<code>complete</code>	<code>LlmComplete</code>

Returns: `AskFn`
