

mdToStorageHtml

September 5, 2026

mdToStorageHtml

Kind: Function

Source: [atloria-monorepo/apps/api/src/technical-docs/techdocs-export.service.ts](https://github.com/atloria-monorepo/apps/api/src/technical-docs/techdocs-export.service.ts)

Minimal markdown → XHTML for Confluence storage format. Covers what our generated

pages actually use (headings, paragraphs, fenced code, lists, bold/italic/inline code, links, tables degrade to paragraphs). Dependency-free on purpose: `marked` is ESM-only and breaks the CJS server build.

Signature

```
function mdToStorageHtml(md: string): string
```

Parameters

Name	Type
<code>md</code>	<code>string</code>

Returns: `string`
