

# mergeAuthoredDocs

September 4, 2026

## mergeAuthoredDocs

**Kind:** Function

**Source:** [atloria-monorepo/libs/parser-core/src/openapi/doc-annotations.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/doc-annotations.ts)

Layer authored sources by strength: later arguments win field by field.

Call it as `mergeAuthoredDocs(docComment, annotation)` — weakest first — so the explicit annotation the author published to their own API tooling always lands on top. An absent

field on the stronger source never erases a present field on the weaker one, which is what

lets a handler keep its JSDoc `@param` prose while `@ApiOperation` supplies the summary.

## Signature

```
function mergeAuthoredDocs(layers: Array<AuthoredDocs | undefined>): AuthoredDocs
```

## Parameters

| Name   | Type                |
|--------|---------------------|
| layers | `Array<AuthoredDocs |

**Returns:** `AuthoredDocs`
