modelToSchema

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/model-schemas.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/model-schemas.ts)

One model → one OpenAPI object schema. A field whose type names another model becomes a

`$ref`, so a response carrying nested records stays navigable rather than collapsing to `{type: object}`.

Signature

```
function modelToSchema(fields: FieldLike[], knownModels: Set<string>): Record<string, unknown>
```

Parameters

Name	Type
<code>fields</code>	<code>FieldLike[]</code>
<code>knownModels</code>	<code>Set<string></code>

Returns: `Record<string, unknown>`
