

normalizeUrl

September 5, 2026

normalizeUrl

Kind: Function

Source: [atloria-monorepo/apps/api/src/tours/tour-targeting.ts](https://github.com/atloria-monorepo/apps/api/src/tours/tour-targeting.ts)

Normalize a URL for comparison: drop the hash, collapse a trailing slash on the path. Querystrings are KEPT (rules may target them); a rule value without a query still matches via prefix rules.

Signature

```
function normalizeUrl(raw: string): string
```

Parameters

Name	Type
raw	string

Returns: string
