

parseAuthorizationResponse

September 4, 2026

parseAuthorizationResponse

Kind: Function

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts`

Read an authorization response off the current URL.

Both carriers are parsed because both are used: the code flow answers in the query string,
implicit in the fragment.

Signature

```
function parseAuthorizationResponse(href: string): AuthorizationResponse
```

Parameters

Name	Type
<code>href</code>	<code>string</code>

Returns: `AuthorizationResponse`
