parseDevice

Kind: Function

Source: [atloria-monorepo/apps/api/src/analytics/utils/tracking-utils.ts](https://github.com/atloria-monorepo/apps/api/src/analytics/utils/tracking-utils.ts)

Derive a coarse device class from the user-agent string. Order matters: we check mobile first (since "Android Mobile" includes both keywords), then tablet, then desktop, then fall back to unknown.

Signature

```
function parseDevice(userAgent: string | null | undefined): DeviceClass
```

Parameters

Name	Type
userAgent	`string

Returns: DeviceClass
