parseEnrichment

Kind: Function

Source: `atloria-monorepo/apps/api/src/docs-pr/page-regen.service.ts`

Parse a stored AI_ENRICHMENT document body into an `EntityEnrichment` .

Mirrors the canonical `parseEnrichmentContent` in `technical-docs/technical-docs-materializer.service.ts` (kept local so this module stays decoupled from the heavy materializer graph). The enrichment format is a set of `### <section>` blocks; unstructured text falls back to a description.

Signature

```
function parseEnrichment(raw: string): EntityEnrichment | undefined
```

Parameters

Name	Type
<code>raw</code>	<code>string</code>

Returns: `EntityEnrichment | undefined`
