parseIdpMetadataXml

Kind: Function

Source: [atloria-monorepo/apps/api/src/auth/saml/saml-metadata.ts](https://github.com/atloria-monorepo/apps/api/src/auth/saml/saml-metadata.ts)

Parse IdP metadata XML into the SP-facing config fields.

Throws when the document is missing a field we cannot proceed without.

Signature

```
function parseIdpMetadataXml(xml: string): ParsedIdpMetadata
```

Parameters

Name	Type
xml	string

Returns: `ParsedIdpMetadata`
