

pickValueAndTitle

September 4, 2026

pickValueAndTitle

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/param-source-inference.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/param-source-inference.ts)

Pick the value and label properties. The value is the item's own identifier — preferring a plain `id` over a foreign key like `projectId`, which would submit the wrong entity.

Signature

```
function pickValueAndTitle(item: SchemaLike, paramName: string): { itemValuePath: string; itemTitlePath: string } | null
```

Parameters

Name	Type
<code>item</code>	<code>SchemaLike</code>
<code>paramName</code>	<code>string</code>

Returns: `{ itemValuePath: string; itemTitlePath: string } | null`
