

POST

September 4, 2026

POST

Kind: Function

Source: [atloria-monorepo/apps/web/src/app/p/\[slugId\]/mcp/route.ts](https://github.com/atloria/atloria-monorepo/blob/main/apps/web/src/app/p/[slugId]/mcp/route.ts)

Slug-fronted, same-origin MCP endpoint: POST /p//mcp — proxies the API's public, urlId-keyed MCP server (docs + entity graph over technical + user manuals). Coding agents

(Claude, Cursor, ...) add this URL directly. Stateless: each POST is a self-contained JSON-RPC

exchange, so no session state crosses the proxy.

Signature

```
async function POST(req: Request, ctx: { params: Promise<{ slugId: string }> })
```

Parameters

Name	Type
req	Request
ctx	{ params: Promise<{ slugId: string }> }
