

redactedProviderError

September 5, 2026

redactedProviderError

Kind: Function

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts`

The provider's error, without anything that could be a credential.

`error` and `error_description` are the two RFC-defined fields; everything else in an error

body is provider-specific and could be anything, so nothing else is read.

Signature

```
function redactedProviderError(payload: Record<string, unknown>): string
```

Parameters

Name	Type
<code>payload</code>	<code>Record<string, unknown></code>

Returns: `string`
