registerParser

Kind: Function

Source: [atloria-monorepo/apps/parser-orchestrator/src/queue/processors/parse.processor.ts](https://github.com/atloria-monorepo/apps/parser-orchestrator/src/queue/processors/parse.processor.ts)

Register a parser implementation

Signature

```
function registerParser(name: string, parser: {  
  parseFile: (filePath: string, content?: string) => Promise<ParseResult>;  
  parseFiles: (files: Array<{ filePath: string; content?: string }>) => Promise<ParseResult[]>;  
}): void
```

Parameters

Name	Type
name	string
parser	{

```
  parseFile: (filePath: string, content?: string) => Promise<ParseResult>;  
  parseFiles: (files: Array<{ filePath: string; content?: string }>) => Promise<ParseResult[]>;
```

```
} |
```

Returns: void
