renderCoupling

Kind: Function

Source: atloria-monorepo/libs/parser-core/src/techdocs/subsystem-narrative.ts

What a change here costs, in edges rather than in adjectives.

The boundary section already names the neighbours. What it cannot say is that they do not lean

equally: a neighbour holding one import and a neighbour holding fourteen are the same row in

that list and are not the same risk.

Signature

```
function renderCoupling(evidence: SubsystemEvidence | undefined, dependents: string[], dependsOn: string[], nameOf: (path: string) => string, entityCount: any): string
```

Parameters

Name	Type
evidence	`SubsystemEvidence
dependents	string[]
dependsOn	string[]
nameOf	(path: string) => string
entityCount	any

Returns: string
