renderNamingSchemas

Kind: Function

Source: atloria-monorepo/libs/parser-core/src/techdocs/naming-schemas.ts

Render the schemas as the section a reader should get instead of a list.

Returns "" when nothing qualifies — a codebase with no conventions should not be told it has

some, and an empty section is worse than an absent one.

Signature

```
function renderNamingSchemas(schemas: NamingSchema[], limit): string
```

Parameters

Name	Type
schemas	NamingSchema[]
limit	any

Returns: string
