rendersAsBlock

Kind: Function

Source: [atloria-monorepo/apps/web/src/components/Viewer/blockNesting.ts](https://github.com/atloria-monorepo/apps/web/src/components/Viewer/blockNesting.ts)

Does this child render as block-level content?

`isVideoHref` is injected rather than imported so this module stays free of the renderer's ESM dependency graph; MarkdownRenderer passes its own known-host allowlist check (a bare link to youtube/vimeo/loom becomes a

embed, so it is block too).

Signature

```
function rendersAsBlock(child: HastChild | null | undefined, isVideoHref: (href: s
```

Parameters

Name	Type
<code>child</code>	<code>HastChild</code>
<code>isVideoHref</code>	<code>(href: string) => boolean</code>

Returns: `boolean`
