renderSubsystemPage

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/subsystems.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/subsystems.ts)

A page for one subsystem: what it is, what reaches it, what it leans on, and how its files are named.

Every sentence here is derived from the resolved graph, and the page deliberately says less than a hand-written one would. It states what depends on this subsystem, where work enters, and which conventions its files follow — and then stops, rather than narrating a purpose nobody wrote down. A generated claim about *why* a subsystem exists is the one thing an AST cannot support, and inventing it is how generated documentation loses a reader's trust for good.

Signature

```
function renderSubsystemPage(subsystem: Subsystem, all: Subsystem[], namingSection, responsibil
```

Parameters

Name	Type
subsystem	Subsystem
all	Subsystem[]
namingSection	any

Name	Type
responsibility	any
flowSection	any

Returns: string
