renderSurface

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/subsystem-narrative.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/subsystem-narrative.ts)

The HTTP surface as a whole, which the capped entry-point list cannot show.

"Where work enters" names six things; a subsystem publishing 47 endpoints across four controllers is a different size of surface from one publishing two, and the list looks identical either way.

Signature

```
function renderSurface(evidence: SubsystemEvidence | undefined): string
```

Parameters

Name	Type
evidence	`SubsystemEvidence

Returns: `string`
