replaceVideoBlockByUrl

Kind: Function

Source: [atloria-monorepo/packages/doc-automation/src/v2/stages/stage-13-upload/video-directive.ts](#)

videoOnly regen: replace an already-rewritten `:::video{...}` block (identified by the OLD src url it contains) with a freshly-built directive. Used to patch the ACTIVE version in place when a re-narration/re-assembly produced a new blob url (cache-bust) and/or new chapters — mirrors the asset-update old → new swap but for the whole directive so chapters stay in sync. Returns content unchanged when the old url isn't present.

Signature

```
function replaceVideoBlockByUrl(content: string, oldUrl: string, directive: string): string
```

Parameters

Name	Type
content	string
oldUrl	string
directive	string

Returns: string
