resolveEntityReferences

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/resolve-references.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/resolve-references.ts)

Rewrite dangling edges onto the entities they name.

Mutates `relationships` in place — the entity graph is passed around by reference through the whole pipeline, and copying it at this size is not free.

Signature

```
function resolveEntityReferences(entities: Entity[], relationships: Relationship[]): ReferenceR
```

Parameters

Name	Type
<code>entities</code>	<code>Entity[]</code>
<code>relationships</code>	<code>Relationship[]</code>

Returns: `ReferenceResolutionResult`
