resolveLanguage

Kind: Function

Source: [atloria-monorepo/apps/api/src/project/language.util.ts](#)

Resolve a language code to its display + direction metadata. Unknown codes degrade gracefully: name = the code itself, dir from the base's RTL set.

Signature

```
function resolveLanguage(code: string | null): ResolvedLanguage
```

Parameters

Name	Type
code	`string

Returns: [ResolvedLanguage](#)
