resolveOpenApiSchemas

Kind: Function

Source: `atlوريا-monorepo/libs/parser-core/src/openapi/schema-resolver.ts`

Resolve request/response schemas for a set of endpoints against a ts-morph Project, assembling OpenAPI 3.1 `paths` (with `content.application/json.schema`) and the shared `components.schemas`. Endpoints whose method/type cannot be resolved fall back to a bare response description — they simply carry no schema, never a broken one.

Signature

```
function resolveOpenApiSchemas(project: Project, endpoints: EndpointInput[], knownModels: Itera
```

Parameters

Name	Type
<code>project</code>	<code>Project</code>
<code>endpoints</code>	<code>EndpointInput[]</code>
<code>knownModels</code>	<code>`Iterable</code>

Returns: `OpenApiFragment`
