resolveRailsRoutes

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/cross-file-routes.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/cross-file-routes.ts)

Prefix a Rails routes file that another routes file `draw`s in.

`draw(:api)` loads `config/routes/api.rb`, and the prefix in force at the draw site lives in `config/routes.rb`. A drawn file normally opens its own `namespace`, so its local paths are already right and stay untouched — this only fires where the draw is genuinely nested, which is the one case the drawn file cannot know about itself.

Signature

```
function resolveRailsRoutes(entities: Entity[]): number
```

Parameters

Name	Type
<code>entities</code>	<code>Entity[]</code>

Returns: `number`
