rewriteVideoTokens

Kind: Function

Source: `atloria-monorepo/packages/doc-automation/src/v2/stages/stage-13-upload/video-directive.ts`

Rewrite all `[[VIDEO:]]` / `[[GIF:]]` tokens in a page's content and collect the per-page ManualVideoGroup rows. Unresolved tokens are dropped (no raw token ever reaches the reader). Idempotent for already-rewritten content (no tokens left → no-op).

Signature

```
function rewriteVideoTokens(content: string, opts: RewriteVideoOptions): RewriteVideoResult
```

Parameters

Name	Type
<code>content</code>	<code>string</code>
<code>opts</code>	<code>RewriteVideoOptions</code>

Returns: `RewriteVideoResult`
