

runWithTenantBypass

September 4, 2026

runWithTenantBypass

Kind: Function

Source: [atloria-monorepo/libs/database/src/lib/tenant-context.ts](https://github.com/atloria-monorepo/libs/database/src/lib/tenant-context.ts)

Run `fn` with tenant scoping explicitly bypassed. Use for a deliberate cross-org read inside a request. If there is no active context this is a no-op passthrough.

Signature

```
function runWithTenantBypass(fn: () => T): T
```

Parameters

Name	Type
<code>fn</code>	<code>() => T</code>

Returns: `T`
