sanitizeEnrichmentExample

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/example-grounding.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/example-grounding.ts)

If the enrichment markdown's `### Usage Example` section calls ungrounded methods on the entity, drop that section (keeping description/diagram/instructions) and return the offending method names. A single hallucinated call makes the whole example untrustworthy — better no example than a lying one. Returns the possibly-rewritten content + what was dropped.

Signature

```
function sanitizeEnrichmentExample(content: string, entity: Pick<Entity, 'name'> & Record<string, any>): { content: string; dropped: string[] }
```

Parameters

Name	Type
content	string
entity	Pick<Entity, 'name'> & Record<string, any>

Returns: `{ content: string; dropped: string[] }`
