sdkAdditionalProperties

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/openapi/sdk-packaging.ts`

Idiomatic `--additional-properties` per generator so every package installs under a name derived from the project rather than "openapi_client".

Signature

```
function sdkAdditionalProperties(language: SdkGeneratedLanguage, packageBase: string): Record<string, string>
```

Parameters

Name	Type
<code>language</code>	<code>SdkGeneratedLanguage</code>
<code>packageBase</code>	<code>string</code>

Returns: `Record<string, string>`
