sdkJobId

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/openapi/sdk-packaging.ts`

Deterministic jobId. BullMQ REJECTS custom ids containing ':' ("Custom Id cannot contain :") — '-' separators only. Deterministic so a burst of spec upserts collapses to one pending job per (project, language, hash); the producer must therefore set `removeOnComplete` AND `removeOnFail` to `true` (a retained job with the same id silently swallows later `add()`s).

Signature

```
function sdkJobId(projectId: string, language: string, specHash: string): string
```

Parameters

Name	Type
<code>projectId</code>	<code>string</code>
<code>language</code>	<code>string</code>
<code>specHash</code>	<code>string</code>

Returns: `string`
