sealSecret

Kind: Function**Source:** [atloria-monorepo/apps/api/src/documentation/payload-crypto.ts](https://github.com/atloria-monorepo/apps/api/src/documentation/payload-crypto.ts)

Seal a secret string. Returns `enc:v1:...` when a key is set; otherwise returns the plaintext unchanged (key not wired yet — the runner still handles it). Empty / nullish values pass through untouched.

Signature

```
function sealSecret(plaintext: T): T | string
```

Parameters

Name	Type
plaintext	T

Returns: T | string
