slugify

Kind: Function

Source: `atloria-monorepo/apps/api/src/document/services/draft-document.service.ts`

Slugify a title into a URL-safe slug (shared with the recorder draft path).

Signature

```
function slugify(text: string, fallback): string
```

Parameters

Name	Type
<code>text</code>	<code>string</code>
<code>fallback</code>	<code>any</code>

Returns: `string`
