stripCommentSyntax

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/doc-annotations.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/doc-annotations.ts)

Strip the comment scaffolding and leave the author's text.

Line structure survives on purpose: descriptions may be markdown, and markdown's meaning

lives in its line breaks (lists, fences, paragraphs). Only the per-line comment furniture and

the common indent go; blank-line runs are capped at one so a docblock's padding does not

become a wall of vertical space.

Signature

```
function stripCommentSyntax(raw: string, style: CommentStyle): string
```

Parameters

Name	Type
raw	string
style	CommentStyle

Returns: string
