

SubdomainPage

September 4, 2026

SubdomainPage

Kind: Function

Source: [atloria-monorepo/apps/web/src/app/subdomain/\[slug\]/page.tsx](#)

Subdomain entry point for *.atloria.app

The middleware rewrites myapp.atloria.app/* → /subdomain/myapp/*

This page resolves the slug to a slugId via the API, then redirects to the existing /p/[slugId] routes which handle all the rendering.

Signature

```
async function SubdomainPage({ params }: SubdomainPageProps)
```

Parameters

Name	Type
{ params }	SubdomainPageProps
