urlMatches

Kind: Function

Source: `atloria-monorepo/apps/api/src/tours/tour-targeting.ts`

Does `url` satisfy the rule list? No rules (absent or empty) → match ALL pages. Rules are OR-ed. Rule values starting with '/' are path rules (compared against pathname+search); anything else is compared against the full normalized URL. An invalid regex never matches (and never throws).

Signature

```
function urlMatches(rules: UriRule[] | undefined | null, url: string): boolean
```

Parameters

Name	Type
<code>rules</code>	<code>UriRule[]</code>
<code>url</code>	<code>string</code>

Returns: `boolean`
