

verifyPendingFlow

September 4, 2026

verifyPendingFlow

Kind: Function

Source: [atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts](https://github.com/atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts)

Validate the authorization response against the flow that started it.

This is the whole point of `state` : without this check any page on the internet could send a reader to this URL carrying an authorization code of the ATTACKER's account, and the playground would quietly start acting as them.

Signature

```
function verifyPendingFlow(pending: PendingFlow | null, response: AuthorizationResponse, currentOrigin: string, now: Date): PendingFlow
```

Parameters

Name	Type
<code>pending</code>	<code>PendingFlow</code>
<code>response</code>	<code>AuthorizationResponse</code>
<code>currentOrigin</code>	<code>string</code>
<code>now</code>	<code>any</code>

Returns: `PendingFlow`
