visibilityKey

Kind: Function

Source: `atloria-monorepo/apps/api/src/reader-access/visibility.util.ts`

Deterministic key for an effective rule — stamped on RAG chunks at index time so retrieval can filter to the caller's satisfiable segments. 'public' when unrestricted. Key stability relies on canonical JSON (sorted object keys), so semantically-identical rules hash identically across restamps.

Signature

```
function visibilityKey(rule: unknown): string
```

Parameters

Name	Type
<code>rule</code>	<code>unknown</code>

Returns: `string`
