

whereHasOrgScope

September 4, 2026

whereHasOrgScope

Kind: Function

Source: `atloria-monorepo/libs/database/src/lib/tenant-backstop.ts`

True if `organizationId` appears anywhere in the where tree (top level or inside AND/OR/NOT), meaning the developer scoped the query intentionally. Presence — not value — is what we check; this is what keeps an intentional `OR: [{ isPublic }, { organizationId }]` from being flagged.

Signature

```
function whereHasOrgScope(where: unknown): boolean
```

Parameters

Name	Type
<code>where</code>	<code>unknown</code>

Returns: `boolean`
