AgentTraffic

Kind: Interface

Source: `atloria-monorepo/apps/api/src/events/agent-analytics.service.ts`

Agent-native analytics — "who/what AI is reading your docs".

A read-side aggregation over the `agent_read` `interaction_events` the public agent surfaces (`llms.txt` / `llms-full.txt` / `.md` twins / MCP) already record via `EventsService`. No new capture. Mirrors `ManualsInsightsService.deflection`: one org-scoped fetch, JS aggregation, a zero-filled daily trend. The `refusedQuestions` panel folds in the `chat_refused` signal — the loop-closer: what agents/users asked that the docs couldn't answer.

Properties

Property	Type
<code>windowDays</code>	<code>number</code>
<code>total</code>	<code>number</code>
<code>byAgent</code>	<code>Array<{ agent: string; count: number }></code>
<code>bySurface</code>	<code>Array<{ surface: string; count: number }></code>
<code>topPages</code>	<code>Array<{ path: string; count: number }></code>
<code>trend</code>	<code>Array<{ date: string; count: number }></code>
<code>refusedQuestions</code>	<code>Array<{ question: string; count: number }></code>
