CrProposedFile

Kind: Interface**Source:** atloria-monorepo/apps/api/src/change-request/change-request.service.ts

files as stored on a draft row: the proposal travels in the row (the job carries only crId). B1 git-sync extends the shape: `createPath` proposes a NEW page (documentId absent until the merge creates it); `delete: true` proposes an UNPUBLISH (never a hard-delete). Both are accepted only on kind:'git' rows — `open()` rejects them everywhere else.

Properties

Property	Type
<code>documentId</code>	<code>`string</code>
<code>proposedContent</code>	<code>string</code>
<code>createPath</code>	<code>string</code>
<code>delete</code>	<code>boolean</code>
